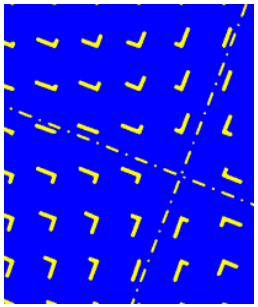
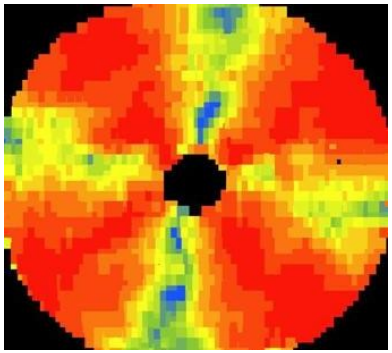
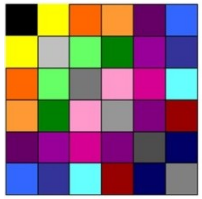
Multi-Component Seismic Principles and Applications

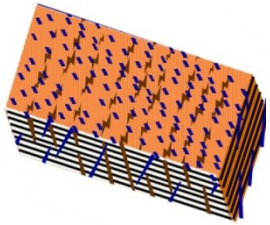
Dr Robert Garotta

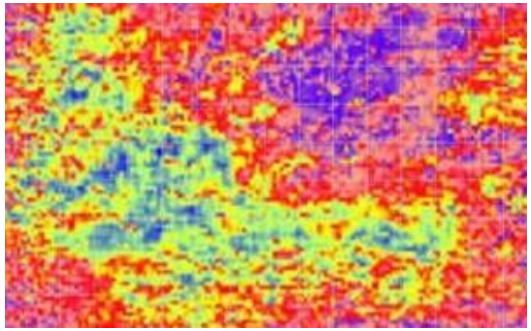
Robert Garotta, one of the fathers of the Seismic Multi-Components methods, developed this course that summarizes his more than 30 years experience by some of the major seismic companies and research institutions worldwide. The course represents an important goal for all seismologists who are interested to advanced P and Shear waves measurements, processing and interpretation.











21 elastic constants
1 symmetry center

$$t_c = \sqrt{\frac{t_{c0}^2}{(1+\gamma_0)^2} + \frac{x_p^2}{v_{p2}^2} - 2\eta_e \Delta t_p^2} + \sqrt{\frac{t_{c0}^2 \gamma_0^2}{(1+\gamma_0)^2} + \frac{(x-x_p)^2}{v_{s2}^2} + 2\zeta_e \Delta t_s^2}$$

GeoNeurale - MUNICH

at the
GATE – Garchinger Technologie und Gründerzentrum

22-24 October 2012

3 DAYS COURSE

INSTRUCTOR: Robert Garotta

LEVEL: Advanced

AUDIENCE: Intermediate and advanced level geologists, geophysicists, seismic processors, independent explorationists, and team leaders/mid level management

COURSE FEES: 2550 Euro + 19% VAT **(VAT Tax is 100% refunded from the German Finance Ministry)**

REGISTRATION DEADLINE : 4 October 2012

ONLINE REGISTRATION: www.GeoNeurale.com

Multi-Component Seismic

Principles and Applications

Participants will expand their understanding of significant techniques and developments in exploration geophysics, and gain a greater appreciation of the use of the attributes derived from multi-component seismic in interpretation.

This course is designed for:

-**Geologically based seismic interpreters who wish to expand their understanding of significant techniques and developments in exploration geophysics.**

- **Processing geophysicists wishing to handle multi-component data and to derive the most significant attributes.**

-**The course topics, listed below, are presented by means of lectures, examples and particular developments about advanced techniques.**

-**Enrollment in this course is limited to 25.**

Multi-Component Seismic Principles and Applications

Course description:

A brief historical overview describes the sources of motivation and subsequent advances in theory and techniques used to apply multi-component seismic.
A reminder of the elastic wave propagation theory fixes the terminology used in this course to classify the different situations appearing in seismic exploration: quasi-isotropic or anisotropic environments can be investigated by different wavefields.
Multi-component seismic has multiple fields of interest. It is sometimes seen as an additional tool to optimize the final acoustic image while particular applications use pure shear wave propagation. More widely used, the converted mode proposes additional information in different ways.
Multi-component acquisition has to satisfy more conditions than conventional acquisition: seismic sources, seismic receivers, and survey designs have to be adapted to the specifics of pure shear mode or converted mode propagations.
In the same way, multi-component processing requires additional quality controls and analyses; the differences between conventional or multi-component processing occur from static corrections up to final imaging.
Finally, the merge of consistently processed data issued from different wave modes delivers seismic attributes and opens ways of getting closer to the rock physics.

PROGRAM

The first two days of the course will be devoted to the presentation of the basic theory of elastic propagation and its consequences about the acquisition and the processing of multi-component data, then to the presentation of 2D and 3D examples of results.

During the third day more details will be given to particular topics:

- shear mode static corrections,

- derivation and use of the Vp/Vs ratios,

- simultaneous combined PP and PS mode inversion,

- detection and compensation of azimuthal anisotropy.

-

Section 1 Historical overview

- Scientists
- Earthquake seismologists
- Civil engineers
- Exploration geophysicists

Section 2 Why use shear waves

-

- When compressional mode fails
- When lithological information is required
- When fluid contend is important
- When confirmation is needed
- When shallow to medium depth resolution is required

Section 3 Theoretical basis

-
- Elastic wave propagation in homogeneous media
- Reflection, transmission and conversion of elastic waves
- Boundary and surface waves
- Wave attenuation
- Modelling

Section 4 Shear wave acquisition

-
- Shear wave sources
- Land multi-component receivers
- Shear wave land acquisition
- PS mode land acquisition specifics
- Shear wave marine and shallow water acquisition

Section 5 Processing of shear wave data

-
- Generalities about Shear mode processing in VTI environment
- Static corrections
- Normal moveout corrections
- Generalities about PSv mode processing in VTI environment
- Processing sequence of PSv mode in VTI environment
- Particulars of marine processing
- S and PSV mode processing in an orthorhombic environment
- Correlation of P and S data

Section 6 Results of shear waves surveys

- Poisson's ratio derivation from P and SH surveys
- Poisson's ratio derivation from P and PSV surveys
- Example of gas detection
- Wave mode comparisons
- Improving the seismic image
- 3Dx3C and 2Dx3C azimuthal anisotropy surveys

Conclusions

Robert Garotta

BIOGRAPHY

Robert Garotta, graduated of the Faculté des Sciences in Paris (DES), began his career at the geophysical department of the French National Centre of Scientific Research (CNRS).

He joined CGG as a field geophysicist, first in the gravity method then as a seismologist.

He was involved in various fields of research and development such as vibroseismic, velocity analysis, static corrections, 3D survey design, shear wave experimentation and processing.

He concluded his career at CGG as Senior Vice President of the Geophysical methods.

Robert is still advising the CGGVeritas group in the area of Multi-Component seismic.

Awards:

- Conrad Schlumberger Award from EAEG 1965
- Prix Charles Bihoreau 1975
- SEG Distinguished Instructor 2000
- SEG Honorary Member 2001

Registration Details

•Course fee: 2550 Euro + 19% VAT (VAT optional for non German private owned companies)

•Registration deadline :

Payment and Registration

Tuition fees are due and payable in Euro upon enrollment in the course by bank transfer to the bank account given below unless another payment form is agreed

Unless otherwise indicated, the payment should be received before the date specified in the invoice as payment term to make the enrollment effective.

To register to the course please fill in the registration form and fax or email it along with the confirmation of your bank transfer to:

GeoNeurale
Lichtenbergstrasse 8
D-85748 Munich
T +49 89 8969 1118
F +49 89 8969 1117

ONLINE REGISTRATION: www.GeoNeurale.com

Bank Information: Genossenschaftsbank EG Muenchen

Bank Account N. 519618 BIC – Code : GENODEF 1M07

BLZ 701 694 64 IBAN : DE19 7016 9464 0000 5196 18

Please indicate your name and the purpose: “Multi-Component Seismic course fee".

Provisions

Tuition fees are due and payable in Euro upon enrollment in the course. Unless otherwise indicated, fees do not include student travel costs and living expenses.

Payments are also accepted via personal or company check, traveler's check, credit card, and Company Purchase Orders.

Cancellations by Participant:

All cancellation are subject to a 100 Euro non-refundable cancellation fee.

Cancellation have to be notified to our office, at least 30 days prior to the course start date to receive a refund (less the 100 Euro cancellation fee).

If the participants are unable to cancel prior to the 32 days notification date, they may substitute another person at their place in a course by notifying us prior to the course start date.

Course Cancellations:

GeoNeurale reserves the right to cancel the courses if necessary. The decision to cancel a course is made at least two weeks prior to the course start date. If a course is cancelled, the participant will receive a full reimbursement of the tuition fees (but not of the plane ticket or hotel expenses or any other costs), or will be enrolled in another course upon his decision (the cost of the original course will be applied to the cost of the replacement course).

GeoNeurale can not be responsible for any penalties incurred for cancellation or change of airline or hotel reservations .

Refunds:

GeoNeurale will promptly remit all refunds of tuition fees due to cancellations or annullment (less any appropriate non-refundable cancellation fee) within 30 days of the course cancellation.

Force Majeure:

GeoNeurale can not be responsible for cancellations due to “force majeure” events : airplane or airport strikes, emergency situations, natural catastrophes and all situations and incidents independent or outside the human control that can delay or cancel the course. In case of such events related cancellations the course tuition fees will be refunded to the client .

Geoneurale is not responsible for any delay or absence caused by the training instructor or training instructor company for reasons which are independent or out of the control of GeoNeurale s decisions.

AGREEMENT: Upon enrollment all parts accept the above mentioned provisions. The above specified provisions shall regulate the agreement between GeoNeurale and the participant and the participant company and will enter into force upon enrollment.

BAVARIA INFO

http://www.geoneurale.com/documents/Around-Munich-Info.pdf

•Munich, the capital of Bavaria with a population of 1.5 million is the third largest city in Germany. Headquarters to industrial giants like BMW, Siemens, MAN, EADS, Eurocopter, Infineon and Epcos it also hosts two of the most important universities in Germany: the "Technische Universitaet Muenchen" and the " Ludwig Maximilian Universitaet" , with international research centers such as the "Max Plank Institut" and the " Fraunhofer Gesellschaft" .

•Geologically important is the presence of carbonate formations in the subsoil that are very favourable for low enthalpy geothermal exploitation, which requires the solution of complex petrophysical problems, similar to Oil Exploration.

•Petrophysic-Consultants, headquartered in Munich, has the expertise and focus that allows them to apply oil exploration technology to complex geothermal exploration.

•GeoNeurale, the society for the Geosciences applications of Geostatistics and Neural Networks promotes the development of modern interpretation methods for reservoir analysis.
